Our claim: Your well-being

Aesthetic management

TREATMENT SUCCESS THROUGH PERFECTION

The Aesthetic Management Laser Institute offers services in dermatological laser treatment and in aesthetic plastic surgery at the highest medical level.

Perfect treatment results are achieved through consistent specialization and the many years of experience of our highly qualified specialists, through permanent quality controls and through continuous training.

Your stay in our institute will be made as pleasant as possible, and we will be happy to fulfill your individual wishes.

We will be happy to answer any other questions you may have in a non-binding consultation at the “aesthetic management” laser center.

OUR SERVICES IN LASER TREATMENT

hair removal

Treatment of couperose and spider veins

Port-wine stain and blood fungus removal

Tattoo Removal

scar treatment

THE GENTLE TECHNOLOGY FOR EFFICIENT FAT REDUCTION WITHOUT SURGERY AND WITHOUT DOWNTIME

Woman being treated with the CoolSculpting method. The ultra-modern, gentle CoolSculpting technology achieves efficient fat reduction through the effects of cold alone – without any surgical intervention. The fat cells are gradually and sustainably broken down by the effects of cold.

The non-invasive procedure was originally discovered by scientists from the famous Harvard University. It is considered a true revolution in aesthetic medicine in the USA. The gentle method has proven particularly effective for the permanent reduction of stubborn fat deposits on the stomach, hips and back.

CoolSculpting has been clinically tested and offers maximum safety with optimal results. More than a million applications have already proven it – and numerous VIPs have also made unloved love handles disappear with CoolSculpting.

BEST POSSIBLE TECHNOLOGY FOR BEST POSSIBLE RESULTS – SOPRANO ICE

Alma Lasers Soprano ICE Alma Lasers Soprano ICE is the most comprehensive and effective laser hair removal solution in the world. By combining multiple laser wavelengths and technologies, Soprano ICE can treat all patients and hair types all year round – quickly, conveniently and with the best possible clinical results. As a pioneer in the industry, Alma develops the most advanced hair removal solutions in the world. By combining the advantages of the Alexandrite wavelength with the advantages of a diode laser, Soprano ICE once again offers the latest in technology and treatment methods.

SHR is a specially developed hair removal method, which is used in practices and clinics worldwide and is associated with the name Alma Lasers. SHR gradually heats the dermis to a temperature that effectively damages the hair roots, preventing hair regrowth and protecting the surrounding tissue. Short pulses with a high repetition rate and high average energy penetrate deep into the dermis and generate the therapeutically effective heat build-up there. The in-motion technique, in which the handpiece is continuously moved over the area, ensures complete treatment coverage. ICE technology cools the epidermis, prevents superficial burns and makes hair removal virtually painless.

YOUR ADVANTAGES:

VIRTUALLY PAIN FREE

SHR is the only clinically proven method of laser hair removal that is virtually painless. The unique process of heat build-up and energy transport effectively damages the hair roots and prevents the hair from growing back, but reliably protects the surrounding tissue. At the same time, the ICE technology cools the skin's surface to prevent superficial burns and pain.

PROVEN SAFE

SHR has been clinically proven to be a safe laser hair removal method for all skin types – including darker skin, which contains melanin that makes it more sensitive to laser treatment. The hair roots are not exposed to a single high-energy pulse, but to repeated low-energy pulses. This minimizes the risk of skin burns, as the temperature required for hair removal is slowly and gently built up in the dermis.

ALL SKIN TYPES

Rather than subjecting the follicles to a single, high-energy pulse, which can damage skin types with high levels of melanin, SHR slowly heats the skin until enough thermal energy is delivered to the hair root. This makes SHR the safest laser hair removal even for dark-skinned patients.

ALSO FOR TANNED SKIN

SHR acts on the melanin of the skin through a unique method that allows treatment throughout the year and even allows the treatment of tanned skin. Sunlight is also less detrimental to skin treated with SHR than other laser treatments.

FULL COVERAGE

During the SHR treatment, energy is applied to a large area, not just in the region of the hair root. The in-motion technique ensures full-surface heating and damages the hair roots evenly in the entire field, which significantly improves the treatment results.

The state-of-the-art gentle technology of CoolSculpting achieves efficient fat reduction through the cold effect alone – without surgical intervention. The fat cells are gradually and sustainably broken
